## MARKED UP CLAIMS VERSION

1. (amended) A reactor plate for the catalytic production of aromatic carbonates, comprising:

a substrate with an array of reaction cells; and

a permeable <u>polycarbonate</u> film covering at least one of the cells to selectively permit transport of a reactant gas into the one cell while preventing transport of a reaction product out of the <u>one</u> cell;

wherein the permeable polycarbonate film selectively admits transport of a reactant but prohibits transport of a reaction product; and

wherein the at least one cell is a cell that is formed from a polycarbonate substrate with two opposing walls comprising permeable polycarbonate film.

- 2. (amended) The reactor plate of claim 1, wherein the <u>permeable</u> polycarbonate film is characterized by a diffusion coefficient of about 5  $\times$  10<sup>-10</sup> to about 5  $\times$  10<sup>-7</sup> cc(STP)-mm/cm<sup>2</sup>-sec-cmHg.
- 3. (amended) The reactor plate of claim 1, wherein the <u>permeable</u> polycarbonate film is characterized by a diffusion coefficient of about 1 X  $10^{-9}$  to about 1 X  $10^{-7}$  cc(STP)-mm/cm<sup>2</sup>-sec-cmHg.
- 4. (amended) The reactor plate of claim 1, wherein the <u>permeable</u> <u>polycarbonate</u> film is characterized by a diffusion coefficient of about and preferably about 2 X 10<sup>-8</sup> to about 2 X 10<sup>-6</sup> cc(STP)-mm/cm<sup>2</sup>-sec-cmHg.
- 5. (amended) The reactor plate of claim 1, wherein the <u>permeable</u> polycarbonate film is about .0002 to about .05 mm thick.
- 6. (amended) The reactor plate of claim 1, wherein the <u>permeable</u> polycarbonate film is about .005 to about .04 mm thick.

- 7. (amended) The reactor plate of claim 1, wherein the <u>permeable</u> <u>polycarbonate</u> film is, desirably about .01 to about .025 mm thick.
- 10. (amended) The reactor plate of claim 1, wherein the <u>permeable</u> <u>polycarbonate</u> film is a monofilm, coextrusion, composite or laminate.
- 11. (amended) The reactor plate of claim 1, wherein the <u>permeable</u> <u>polycarbonate</u> film selectively admits transport of a reactant and prohibits transport of a reaction product.
- 12. (amended) The reactor plate of claim 1, wherein the <u>permeable</u> <u>polycarbonate</u> film selectively admits transport of oxygen and carbon monoxide and prohibits transport of a diaryl carbonate.
